

# README

This document explains what the various IPython notebooks contain.

1. The first analysis on DreamWorks vs Pixar is contained in the notebook 'DreamWorks vs Pixar'. The folder 'data' contains the movie ratings scraped from the different websites.
2. The second analysis on the accuracy of critic ratings is contained in the notebook 'critic\_accuracy'. The file 'topcriticreview' contains the ratings from the top critics scraped from Rotten Tomatoes.
3. The third analysis on movie genre recommendation is contained in the notebook 'Ranking movie preferences for a single user'. The data for a single user is scraped from Rotten Tomatoes and is in the file 'one\_user\_data'.
4. The fourth analysis on the time series of sales data is contained in the notebook 'Time Series'.
